**(54) REGISTER MARK  
RECORDING METHOD IN  
PICTURE SCANNING AND  
RECORDING DEVICE**

(57) Abstract:

**PURPOSE:** To execute the alignment with high accuracy by recording a cross-shaped register mark of one resolving edition, and other mark by negative type and a positive type, respectively, when recording the register mark by a color scanner.

**CONSTITUTION:** When outputting a signal to be recorded by coupling two kinds of line images, its signal and its inverted signal are outputted selectively, and a cross-shaped positive line image A and a cross-shaped negative line image A' are recorded. When matching and aligning the positive line image A and the negative line image A', failure of the matching state can be discriminated easily.
